Volkach administration community

**PROJECT**

**Landslide in Escherndorf area of town of Volkach**

- Several large landslip areas, some of them active since the 1960s, resulting in vertical slippage of up to approx. 9 m and correspondingly large movements of earth, exist over a total surface area of approx. 25 ha within the “Escherndorfer Fürstenberg” vineyard
- Remediation measures to stabilize the slope have been carried out on several occasions in the past
- An area totalling approx. 10 ha in size still shows landslip activity
- Considerable damage was caused to the wine-growing areas and the associated infrastructural facilities

**OUR SERVICES**

- Inspection of existing documentation, historical research
- Interviews with eyewitnesses
- Geological surveys / mapping Presentation of the results in a geotechnical report inc. remediation recommendations
