PROJECT

Avalanche and rockfall stabilization, Steinenkircher Steige

- Constant risks to road traffic from km 1.0 to km 1.6 on the L 1221 between the townships of Eybach and Steinenkirch
- Rock and stone falling onto the road from the scars on the mountain side of the road
- The scars project up to approx. 30 m from the slope, which has an average incline of 30 to 40°, and form an intermittent shelf

OUR SERVICES

- Taking of oblique aerial photographs as a basis for mapping
- Geotechnical site survey of the scars and side slopes on the mountain side
- Risk assessment
- Specification of rock mechanical parameters
- Assessment of the stability of the slope and ledge
- Stabilization and redevelopment proposals in a study of options with cost estimate
