Project:
S21 northern ring connection at Potsdamer Platz, 2nd construction phase from Berlin main railway station to Potsdamer Platz

- Construction of a new underground two-track suburban railway line (section 6071) approx. 1.2 km long from Berlin main railway station to Potsdamer Platz
- Crossing underneath the Spree and Spreebogenpark
- Passing under the underground Bundestag access building
- Passing over the underground railway
- Connection to the crossing structure with the S21 at the “Heuboden” railway facility

Our Services:
- Investigation concept
- Invitation to tender for the subsoil analyses
- Geotechnical site management for the boring works
- Subsoil assessment and foundation works consultancy for the planning
- Tunnel engineering expert report
- Analyses and recommendation for the tunnel construction
- Rough and detailed concept for soil utilization and disposal
