**PROJEKT**

- Conversion of the Hase weir at Quakenbrück
- Extensive bank and terrain modifications as part of the reconfiguration
- Dismantling of the weir facility and construction of a new bed pitch with meandering dryweather runoff in the upper section of the overfall Hase
- Regulation of the dry and high-water runoff in the outfall area of the raised Hase through an arched bulkhead
- Filling of the existing erosional cavity area below the weir

**OUR SERVICES**

- Subsoil analyses
- Subsoil evaluation and foundation works consultancy
- Hydraulic evidence
- Establishment of groundwater measuring points on the left and right of the existing weir and the planned eastern bank line
