DEVELOPER

Neckar Development Office, Heidelberg

PROJECT

Repair of base of Horkheim weir

- Three weir gates will be upgraded, entailing drainage of the site
- To ensure buoyancy control of the weir bottom under construction and for inspection purposes, ground anchors will be put through the existing weir bottom from the pontoon

OUR SERVICES

- Advice on the pre-hardening of anchor holes below the weir bottom and on the concrete beam of the head water bulkhead
- Processing of the status report for the weir with analysis of the results of water tests
